Incorporating:

EquipSmartQ

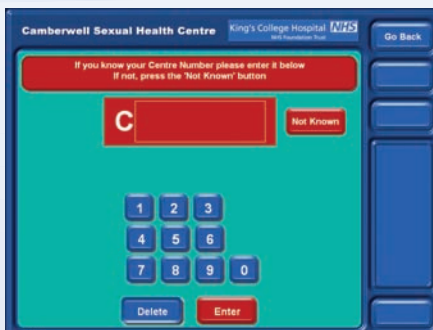

Equip Smart Q is the only truly integrated queue management, check in, triage and self service system available in the UK. This innovative modular system has been adopted by the NHS and offers significant benefits to patients and healthcare professionals. These include:-

- > **User friendly**
- > **Accelerated check in process**
- > **Simplified queue management**
- > **Improved customer experience**
- > **Integrated self service offering**
- > **Staff time freed up**
- > **Improved confidentiality**

How it works?

This complex product simplifies the whole process for all involved, it's simple, quick and efficient. This is how it works:-

- > **The customer checks in through an attractive touchscreen kiosk.**
- > **By answering a number of clinical questions "Equip" places the user in the right clinical queue or offers self service.**
- > **The user gets a ticket with their clinic ID and Queue number.**
- > **If self service they are given a token and directed to a vending machine in the clinic.**
- > **The queue numbers are shown on large format screens in the clinic. Whilst waiting the user can use the touchscreen information points dotted around the clinic.**
- > **The clinician sees the queue details and user reasons for attendance on their PCs, when they are ready the clinicians simply click on the user and this allocates and calls the patient to the clinician's room. This removes the user from the queue.**
- > **When consultation is complete the clinician enters the details on the system and the database is updated.**
- > **A suite of management reports are available.**
